

Day 4: Building Several Components

On Day 4, the focus is on creating missing components and improving the UI to align with the Figma design. This includes completing the following key pages:

1. **About Page:** A detailed section about the marketplace, its mission, and the team behind it.
2. **Favorite Products Page:** A page where users can view and manage their favorite or saved products for later purchase.

Key Objectives

- Build missing components identified in the Figma design.
- Ensure the new components are dynamic and reusable, keeping scalability in mind.
- Fix any UI inconsistencies across the site to improve the overall user experience.

By the end of Day 4, these additions and improvements will complete important aspects of the website and move us closer to a polished, user-ready product.
